Quickbooks

Bypass Quickbooks Desktop Forced Update Counter

If you receive a mandatory Quickbooks update and you've exceed the update countdown your only option is to either install or close Quickbooks. In large deployments with auto update enabled this can cause issues. Here's a quick and easy way to work around this on a workstation, buying you some time to upgrade the entire firm/site.

- CTRL-ALT-DELETE (or right click Start button)
- Task Manager
- Find the "Quickbooks Update Service" child process under Quickbooks. Right-click the process and end task.

Name Status Apps (11)	PID	25%	410/		
Apps (11)		CPU	41% Memory	0% Disk	N
> 👩 Google Chrome (33)		1.7%	3,199.6 MB	0.1 MB/s	C
> 📫 Microsoft Teams (8)		0%	557.7 MB	0 MB/s	
 QuickBooks (32 bit) 	18740	0%	39.1 MB	0 MB/s	
QuickBooks Update Service	Switch to				
> 📰 ScreenConnect Client	Bring to front		45.8 MB	0 MB/s	
> ScreenConnect Client	Minimize		285.2 MB	0 MB/s	
> ScreenConnect Client (2)	Maximize		31.0 MB	0 MB/s	
> 🖻 Snipping Tool (2)	End task		4.2 MB	0 MB/s	
> 🛃 Sticky Notes (2)		0%	38.4 MB	0 MB/s	
> 🔤 Task Manager	3420	0.3%	34.6 MB	0 MB/s	
> 🛤 Windows Command Processor		0%	2.4 MB	0 MB/s	
> 🚬 Windows PowerShell	1452	0%	52.8 MB	0 MB/s	

Fewer <u>d</u>etails

End task

Note that QB will start pretty slowly but will eventually open, and be usable.
