The Selected Task "{0}" No Longer Exists with QuickBooks Scheduled Backup Task

If you are troubleshooting Quickbooks scheduled backups not running, you may receive the following error while force running a Quickbooks backup task via the Windows Task Scheduler:

This is typically due to the user who scheduled the jobs not having administrative access to the computer. Sometimes even rescheduling the job as an alternate administrative user doesn't work.

The fix for this is to check the "Run with highest privileges" checkbox in the General tab of the task and re-save it.

General Triggers Actions Conditions Settings History

Name: [Redacted]

Location: \

Author: BG\administrator

Description:

Security options

When running the task, use the following user account:

administrator Change User or Group...

☐ Run only when user is logged on

☒ Run whether user is logged on or not

☐ Do not store password. The task will only have access to local computer resources.

☒ Run with highest privileges

☒ Hidden

Configure for: Windows Server™ 2003, Windows® XP, or Windows® 2000

OK Cancel

One you've saved the task, try right-clicking and running it again.
