Windows

Running Wireguard without Local Admin/Administrator Rights

Here are the steps to getting Wireguard and the Wireguard UI to run as a standard, non-administrative user on Windows.

1. Logon as a local administrator
2. If it doesn't exist, create a new registry key **Wireguard** at **HKLM\Software**
3. Create a 32-bit DWORD in **HKLM\Software\WireGuard** - **LimitedOperatorUI** - set to 1
4. In Computer Management, add the limited user who you need to access the Wireguard UI to the **Network Control Operators** user group
5. Run Wireguard and install/import the VPN configuration
