phpMyFAQ Search Broken After Upgrade to 3.2.2

If your search is no longer working after an upgrade from 3.1.17 to 3.2.2 or above, make sure to set search relevance to false.

In the faqconfig table, set search.enableRelevance to false.

Or in the GUI, here:

Edit configuration

[Main](#) [FAQs](#) [Search](#) [Security](#) [Spam control center](#) [SEO](#)

| | |
|-------------------------------|---|
| Number of listed search terms | <input type="text" value="10"/> |
| Sort by relevance | <input type="text" value="Question - Answer - Keywords"/> |
| Activate relevance support? | <input type="checkbox"/> |
| Highlight search terms | <input checked="" type="checkbox"/> |
| Search for solution ID | <input checked="" type="checkbox"/> |
| Enable Elasticsearch support | <input type="checkbox"/> |

If you can't save any settings in the GUI, clear your site cookies and log back in. Also ensure any caching systems aren't caching /admin.

Unique solution ID: #1137
