

phpMyFAQ Search Broken After Upgrade to 3.2.2

If your search is no longer working after an upgrade from 3.1.17 to 3.2.2 or above, make sure to set search.relevance to false.

In the faqconfig table, set search.enableRelevance to false.

Or in the GUI, here:

🔧 Edit configuration

The screenshot shows the 'Edit configuration' page with the 'Search' tab selected (indicated by a red box). The configuration options are listed on the left, and their corresponding values or states are on the right. The 'Activate relevance support?' checkbox is highlighted with a red box.

Setting	Value
Number of listed search terms	10
Sort by relevance	Question - Answer - Keywords
Activate relevance support?	<input checked="" type="checkbox"/>
Highlight search terms	<input checked="" type="checkbox"/>
Search for solution ID	<input checked="" type="checkbox"/>
Enable Elasticsearch support	<input type="checkbox"/>

If you can't save any settings in the GUI, clear your site cookies and log back in. Also ensure any caching systems aren't caching /admin.
